EXPERIENCE

Amazon AGI — Seattle, WA

Software Development Engineer II — Jun. 2026 – Present

Software Development Engineer I — Mar. 2024 – Jun. 2026

- Initiated and led a 3-person rebuild of ML egress from secure HPC environments after a data-driven audit exposed gaps in the legacy system; architected a service governing LLM-judge output exports with inline PII scanning, anomaly detection, and incident response, migrating 14 teams (11 PB of storage) with zero downtime, saving $100K+/yr
- Engineered an AWS Glue data pipeline scanning 153B records for a Tier-1 service; partnered with Legal and Security to purge 1.8B non-compliant records, cutting storage and replication costs by $500K+/yr
- Automated Model Registry onboarding for 200+ models through infrastructure provisioning (S3, IAM, CloudFormation) and integration tests, cutting model onboarding time by 83% and eliminating manual setup
- Designed and built CVE scanning into a self-service model training platform's provisioning pipeline across all ~40 first-party model configurations, blocking 12 vulnerabilities from reaching production clusters in 2 months
- Shipped a self-service Python CLI for S3 IAM role provisioning with automated security verification, cutting onboarding time by 90% and saving 100+ engineering days in 2025
- Implemented least-privilege auditing across 16 HPC Kubernetes clusters holding 750+ PB of pre-training data; found and closed 10+ over-permissive access paths and unsafe FSx mount configurations
- Won 1st place in the AGI org hackathon: built a multi-agent incident response service (Bedrock Agents, RAG via Amazon Kendra) that autonomously triages production incidents across teams to accelerate first response
- Rated "Exceeds Expectations" and "Role Model" (top tier) in 2026 performance review; authored 8+ design docs, mentored an intern to production launch, and interviewed SWE candidates

Amazon Web Services (Industrial Products) — Washington, D.C.

Software Development Engineer Intern — May 2023 – Aug. 2023

- Built a Java microservice (Elasticsearch, fuzzy matching via Jaccard, Levenshtein, and Manhattan distance) that surfaces 3,000+ JSON blueprint documents in S3 by similarity; owned the design and earned an "Exceeds Expectations" rating

Brown University Computer Science Department — Providence, RI

Undergraduate Teaching Assistant — Sep. 2021 – May 2023

- Taught 500+ students in Data Science, Cybersecurity Ethics, and Computing Foundations: Data; led labs and projects

EDUCATION

Brown University — Providence, RI

Sc.B. in Computer Science (Machine Learning & Data Science) — Sep. 2019 – May 2023

SKILLS

Languages: Python, Java, TypeScript, C++, SQL, Bash
ML & Data: PyTorch, TensorFlow, scikit-learn, PySpark, Pandas, NumPy
Cloud & Infra: AWS (CDK, Glue, Lambda, Step Functions, DynamoDB, SQS/SNS, IAM, Macie, Bedrock), Kubernetes, Docker
Interests: Mountaineering, Basketball, Golf, Snowboarding, Top 5% on Beli, Late Qing Political History, Existentialism
